

## Project Design Phase-I Solution Architecture

Date	22 September 202
Team ID	
Project Name	A Comprehensive Analysis of the IT Sector's salaries and roles
Maximum Marks	4 Marks

### Solution Architecture:

Solution architecture is a complex process – with many sub-processes – that bridges the gap between business problems and technology solutions. Its goals are to:

- ❑ Find the best tech solution to solve existing business problems.
- ❑ Describe the structure, characteristics, behavior, and other aspects of the software to project stakeholders.
- ❑ Define features, development phases, and solution requirements.
- ❑ Provide specifications according to which the solution is defined, managed, and delivered.

### Example - Solution Architecture Diagram:
